SUMMARY:

AI-assisted Software Engineer and recent Computer Science graduate with over 10 years of programming experience, beginning with iOS development at age 12. Strong foundation in data structures, algorithms, systems programming, and full-stack development. Experienced in building, testing, and deploying applications across web, cloud, AI, and cybersecurity domains. Proven ability to use modern AI tools (Cursor, Claude, GitHub Copilot, OpenAI) to accelerate development while maintaining high code quality through human review. Seeking an entry-level role in software engineering, AI systems, or cloud-based development.

TECHNICAL SKILLS:

Languages: Java, Python, JavaScript, C#, C++, C, Rust, SQL, Bash, Assembly, Visual Basic

Frameworks & Tools: React, REST APIs, Git, Sourcetree, JetBrains IDEs, Visual Studio, Unity, Unreal Engine

AI & Automation: Cursor, Claude, GitHub Copilot, OpenAI APIs, Zapier, Replit

Cloud & DevOps: Azure, GitHub Actions, Linux environments

Databases: SQL Server, SSMS

Other: Google Colab, GitHub, TestFlight, Linear, SharePoint, Photoshop

PROJECT EXPERIENCE (Selected):

AI-Assisted Software Development Projects

- Built and deployed multiple web and automation projects using AI-assisted workflows for scaffolding, debugging, and optimization.
- Used Cursor, Claude, and GitHub Copilot to generate boilerplate code, refactor logic, and accelerate feature development.
- Performed human code reviews to ensure correctness, security, and maintainability of AI-generated output.
- Integrated third-party APIs and automation platforms (Zapier, OpenAI) into production-style workflows.

PROFESSIONAL EXPERIENCE:

Software Engineer (Contract)

NurseLoop — Remote | August 2025 – November 2025

- Conducted continuous testing and quality assurance across product builds, identifying and preventing 25+ bugs prior to demos.
- Provided detailed UI/UX feedback, improving usability and overall product polish.
- Integrated Zapier automations with Linear to organize engineering workflows and task management.
- Built visualizations converting tables into Gantt-style views, improving team clarity and execution efficiency.

Software Engineer (Intern)

FreightPOP — Lake Forest, CA | Summer 2024

- Developed and maintained backend systems using C# in a collaborative Agile environment.
- Resolved 20+ software defects, improving system reliability and user experience.
- Implemented SQL injection prevention and data-masking techniques, improving application security by ~30%.
- Reduced UI-related errors by ~40% through improved error handling and validation logic.

IT & Software Engineering (Intern)

Reaction Audio Visual — Rancho Santa Margarita, CA | Summers 2021–2023

- Built Zapier-based automations and early AI agents to integrate HubSpot and internal systems.
- Imaged, configured, and deployed 100+ Macs, PCs, and iPads across multiple environments.
- Automated system updates and portal changes using custom scripts, reducing manual workload by ~25%.
- Managed SharePoint and Microsoft Teams infrastructure to streamline internal communication.

EDUCATION:

Bachelor of Science in Computer Science

Baylor University — May 2025

Relevant Coursework: Data Structures, Algorithms, Systems Programming, Operating Systems, Cybersecurity, Artificial Intelligence, Database Design, Data Science & LLMs, Digital Logic Design

CERTIFICATIONS:

Certificate in AI Agents and Agentic AI with Python & Generative AI — *Vanderbilt University*

Certificate in AI Agents and Agentic AI Architecture in Python — *Vanderbilt University*

AI WORKFLOW HIGHLIGHTS:

- Use AI tools to accelerate development, generate tests, refactor code, and assist with debugging.
- Apply engineering judgment and manual review to validate AI-generated logic and security.
- Combine classical CS fundamentals with modern AI-assisted workflows to deliver production-ready software.
- Comfortable collaborating in Agile environments using AI-enhanced productivity tools.
